Notes on the Indices of Agricultural Production

The attached tables present indices of agricultural production for 28 countries of Africa and constitute a revision of the indices that were published by the Economic Research Service in November 1961.

As in the previous study, these indices have been calculated on a postwar base (average 1952-53 - 1954-55). For the countries in Northern Africa production data for 1957-58, 1958-59, 1959-60, 1960-61, and 1961-62 have been revised to incorporate more recent refinements in crop estimates, and those for 1962-63 have been added. In a few instances revisions in the data for the base period were also made. For the countries in Southern Africa production data for 1957-58, 1958-59, 1959-60, and 1960-61 have been revised and those for 1961-62 have been added.

The split year designated as 1962-63 for Northern Hemisphere countries indicates crops harvested during the late spring, summer, and fall of 1962, but may include some crops, e.g. citrus, with harvests continuing into the early months of 1963. For Southern Hemisphere countries the split year 1961-62 indicates crops harvested in the latter half of 1961 and the first half of 1962. Data for livestock products are generally on a calendar year basis of the first year mentioned.

Postwar price weights were used in computing the indices. Available data on prices in these countries, including FAO price weights, were used in establishing weights. The prices used represent the average postwar value of a metric ton of each agricultural commodity in the various countries at comparable stages in the marketing channels. The individual commodity price is expressed

as a percent of the value of a metric ton of wheat. Thus, a metric ton of barley, with a price weight of 65, is equal in value to 0.65 of a ton of wheat.

To calculate agricultural production indices for each country, the production of each commodity was multiplied by the price weight and the resulting aggregates were summed. The total aggregate for a given year was then divided by the aggregate for the base period to obtain the index. The per capita indices were obtained by dividing the indices of total agricultural production by the population indices.

The same procedure was followed in calculating the food production index, but only food crops were used. The commodities that were considered as food are listed on page 53. The total output of each edible commodity was included in the food production index regardless of whether or not it was all actually consumed as food. Similarly, no cognizance was taken of foreign trade, seed reserves, waste, or stock carryover. For these reasons, the indices of total and per capita food production are not to be regarded as indices of consumption.

It should be recognized that these indices represent not only basic changes in agricultural technology and economic development, but also, in some instances, special climatic conditions and changes in the political and economic situation.

Table 1.--

1/ The bulk or all of the harvest occurs in the first year of the split year combination.

2/ Excludes sulphur oil.

3/ Oil pressed in marketing season beginning November 1 of first year shown.

4/ The bulk of the harvest occurs in the second year of the split year combination.

5/ Includes lemons.

6/ Calendar year of first year shown.

7/ Sheep is of first importance followed by goats, camel, and cattle.

8/ Estimated at about 35 percent sheep, 30 percent goats, 15 percent camel, 5 percent cattle and the remainder other meat.

1/ Production data for former Spanish Morocco is in part estimated.

2/ The bulk or all of the harvest generally occurs in the first year of the split year combination.

3/ Excluding sulphur oil.

4/ Oil pressed in marketing season beginning November 1, of first year shown.

5/ The bulk of the harvest occurs in the second year of the split year combination.

6/ On calendar year basis of first year shown.

7/ About 40 percent goat milk and 35 percent cow's milk; the remainder is principally sheep milk.

8/ Fairly equally divided between beef and veal, and mutton and lamb with a remainder of about 5 percent representing other varieties.

1/ The bulk or all of the harvest generally occurs in the first year of the split year combination.

2/ The bulk or all of the harvest generally occurs in the second year of the split year combination.

3/ The harvest is so distributed between the two years of the split year combination that it is impossible to determine the year where the bulk of the harvest occurs.

4/ Estimated at slightly less than half beef; the remainder mostly lamb and mutton.

5/ Cow's milk is of first importance, followed by sheep, goat, and camel.

6/ On calendar year basis of first year shown.

1/ The bulk or all of the harvest generally occurs in the first year of the split year combination.

2/ Excluding sulphur oil.

3/ Oil pressed in marketing season beginning November 1, of first year shown.

4/ The bulk of the harvest occurs in the second year of the split year combination.

5/ Calendar year of the first year mentioned.

6/ About half goat milk; the remainder mostly cow and sheep milk.

7/ About two-thirds mutton and lamb; the remainder principally beef and veal.

1/ The bulk or all of the harvest occurs in the second year of the split year combination.

2/ The bulk or all of the harvest occurs in the first year of the split year combination.

3/ Calendar year of the first year mentioned.

4/ The harvest is so evenly divided between the two years of the split year combination that it is impossible to determine the year where the bulk of the harvest occurs.

5/ Less than 500 metric tons.

6/ Net exports of natural rubber, Rubber Statistical Bulletin; 1961 estimated by Agricultural Attache.

7/ Ghana financial year, July - June.

8/ About 84 percent beef, 6 percent goat, 5 percent mutton, and 5 percent pork.

1/ Bulk of all crops, excluding rice and coffee, are harvested in the first half of the split year combination - mainly calendar year.

2/ Rice - Main harvest March to June.

3/ Vanilla - Harvest May-August

4/ Coffee - Main harvest June-November.

3/ The bulk or all of the harvest occurs in the first year of the split year combination

4/ Less than 500 metric tons.

5/ About 59 percent beef, 27 percent goat, 10 percent mutton, and 4 percent pork.

6/ About three-fourths cow's milk.

1/ All production figures are for South African fiscal year beginning July 1.

2/ Includes Swaziland sugar production.

3/ Deciduous fruit includes commercial canned fruit (also canned pineapple), and table grapes (no separate figures yet on canned citrus juice). Total deciduous production was officially estimated for the first time in 1961-62 at 466,638 short tons.

4/ Principally beef--includes livestock imports from South West Africa and livestock and meat imports from 3 High Commission Territories.

5/ Nearly all cow's milk, including condensed and dried milk.

6/ Wool includes South West Africa and High Commission Territories (including karakul wool).

7/ Hides and skins do not include karakul pelts from South West Africa.

1/ Bulk of the harvest not otherwise indicated occurs in the first year of the split year combination; some harvested throughout the year.

2/ Bulk of the harvest is so evenly divided between the two years of the split year combination that it is impossible to determine the year where the bulk of the harvest occurs.

3/ Bulk or all of the harvest generally occurs in the second year of the split year combination.

4/ Cotton production statistics are those of Foreign Agricultural Service starting August 1 of the first year mentioned.

5/ Coffee production statistics are for the year ending September 30 of the second year of the split year combination.

6/ Less than 500 metric tons.

There are generally two rainy seasons (long and "fly" rains).

Table 30.--UPPER VOLTA: Indices of agricultural production, volume of production and aggregates:
Average 1952-53 - 1954-55 (base period) and annual 1957-58 through 1961-62

1/ The bulk or all of the harvest occurs in the first year of the split year combination.

2/ Calendar year of the first year mentioned.

3/ The harvest is so evenly divided between the two years of the split year combination that it is impossible to determine the year where the bulk of the harvest occurs.

4/ The bulk or all of the harvest occurs in the second year of the split year combination.

The following items were considered as food in the calculation of these indices:

Wheat
Corn
Barley
Oats
Rice, paddy

Palm kernels
Soybeans
Shea nuts
Bambara groundnuts
Cocoa

Sorghum and millet
Other grains
Beans and peas
Cowpeas
Pulses

Sugar, refined
Kola nuts
Cashew nuts
Almonds
Bananas

Cassava
Yams
Sweetpotatoes
White potatoes
Cocoyams

Plantains
Citrus fruit
Deciduous fruits
Grapes
Dates

Taro
Mangoes
Peanuts, unshelled
Cottonseed
Sesame seed

Figs
Pineapples
Apricots
Artichokes
Carrots

Copra
Sunflower seed
Nigerseed
Rapeseed
Palm oil
Olive oil

Onions
Peppers
Tomatoes
Milk
Eggs
Meat
